

Please consult your spauser manual for complete info on the features of your spa system.

Standby Mode ()

When this feature is activated, it allows to stop all pumps at the same time by a simple click of a button!

Use **Standby** key to pause all pumps.

Progress bar will display the remaining time before the system automatically exits Standby mode (user can also exit Standby mode at any time by pressing again on Standby key).

Pump 3 key 3

Press **Pump 3** key to turn Pump 3 on at high speed.

Press a second time to turn pump off.

A built-in timer automatically turns pump off after 20 minutes, unless pump has been manually deactivated first. In order to warn the user, the spa light will flash for a few seconds before the exit of Standby mode and restart the pumps. The "Stby" message is also displayed during Standby mode.

1

Setting filter cycle start time

To program the filter cycle, you must enter these parameters: the start time, duration and frequency. During a filter cycle, pumps run for one minute to purge the plumbing, then Pump 1 low speed runs for the programmed number of hours.

Press Ok key a second time.

The display will show FSxx, with "xx" representing the starting hour.

Use (+) or (-) key to change setting (01:00-12:00 AM/PM).

Setting Economy start time

To program the Economy mode, you must enter two parameters: the start time and the duration.

- Press Ok key a sixth time.
- The display will show ESxx, with "xx" representing the starting hour.
- Use (+) or (-) key to change setting (0:00 h - 23:00h).

Setting filter cycle duration

Press Ok key a third time.

The display will show Fdxx, with "xx" representing the duration in hours.

Use (+) or (-) key to change setting (0-12 hours).

Setting Economy duration

- Press Ok key an seventh time. • The display will show Edxx, with "xx" representing the duration in hours.
- Use (+) or (-) key to change setting. If the Economy mode is not required the duration must be set to "0". If continuous activation of the Economy mode is required the duration must be set to "24".

Water temperature regulation

In a regulation cycle, the system first generates water flow through the heater housing and the plumbing, in order to ensure accurate water temperature readings as well as avoiding heater activation in dry conditions

After verifying pump activation and taking a water temperature reading if required, the system automatically turns the heater on to reach and maintain water temperature at Set Point.
